Meet the Staff!

Hi! My name is Kim- I have been a technician at TOCEye for about a year and a half. My favorite thing about working here is how rewarding it is to work with the patients. When I'm not at work I enjoy hanging out with my husband C.J. and my dog Ellie. My hobbies outside of work include doing hair and makeup- I graduated from cosmetology school, but have found my passion working here!

Did You Know?

Dogs can see yellows, tans and blues but not shades of red! They can also detect movement from much greater distances that people can!

Now You Know.

**Do you have Cataracts?
Wish you were FREE from glasses?
Let's Talk about Refractive Cataract Surgery!
With Michael Connors, MD, PhD**

A cataract is a clouding of the eye's naturally clear lens. Cataracts can start to develop in our 40's and slowly progress, often without our notice. Signs of cataract progression can include trouble with driving at night, especially in the rain, glare and halos around lights, colors that appear to be faded, decreased vision or a "film over your vision. If you are experiencing any of these symptoms it might be time for you to have your cataracts removed and reclaim the vision you once had!

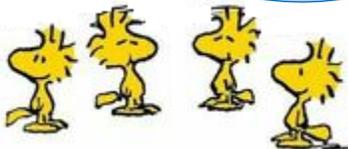

Cataract surgery removes the old, clouded lens and replaces it with a new, artificial one that restores your vision. Standard cataract surgery often eliminates the need for distance glasses, but with advances in today's technology, our surgeons now have the ability to eliminate your dependence on glasses for far and near.

This is known as Refractive Cataract Surgery and is accomplished with the use of special multi focal or accommodating lenses. These lenses provide excellent vision at all distances, under all lighting conditions and can give you independence from all glasses! Even patients who have mild cataracts, without symptoms, may be eligible for this procedure.

At The Ophthalmic Center we specialize in refractive Cataract Surgery-give us a call today and take the first step toward better vision and eliminate your dependence on glasses!

What Dr. Basilice's Wife, Dahna knows for sure:

Anyone can hold the helm when the sea is calm.
Being a leader is not about being perfect.
It's about weathering the storm and carrying on.
